Our mission is to improve the quality of the camping experience through continuous innovation.

Ed Gennissen, CEO
Driving Change Group

The Driving Change Group

Driving Change is a vision that reflects our path to success.

Started as Horrex in 1987, today Driving Change is a group of companies that develops, innovates and produces a wide range of products for the RV market across the globe.

We never copy products, we innovate and develop within the spirit of what a wise man named Kennedy once said:

“We choose to go the moon, not because it’s easy but because it’s hard”.

The Driving Change Group is headquartered in The Netherlands and operates with a hub in the UK. We supply leading OEMs in 32 countries, including the United Kingdom,

Germany, France, Italy, Australia, Japan, Canada and the USA.

We are continuously improving ourselves, striving to be as innovative and as successful as we can.

We can quickly customise products to any interior and design. These products can be supplied completely assembled as well as a flat-pack kit, all according to the customers’ preferences.

We would love to introduce you to our products and concepts from our well-known flyscreen and window blind products to more recent developments such as the Inno Slide and the Clike Bike.

Innovation

Flexibility

Modularity

Innovation

From the start in 1987, Driving Change Group has introduced new concepts to the market and innovated existing systems. Horrex was the first to launch a flyscreen door for a recreational vehicle.

Over the years more innovations have followed:

- Pleated flyscreen versions
- Stepless pull bar
- Black-out pleated blind
- Flyscreen door for camper vans
- Curved systems
- Black-out honeycomb fabric
- Fire retardant material
- Tailored products for individual customers and markets worldwide

In line with our philosophy DRIVING CHANGE we aim to introduce new products every year!

100+

Customers

1 Window Solutions

Our windows undergo a special production process, in which they are welded, polished and lastly lacquered. Competitive windows are often pressed together and then lacquered, creating a seam and are at risk of leaking. Our production process makes the windows seamless and 100% leakage free. They are equipped with stepless telescopic stays, for convenient functionality.

Sidenote: It's always needed to order window clips separately, since each customer wall thickness might be different

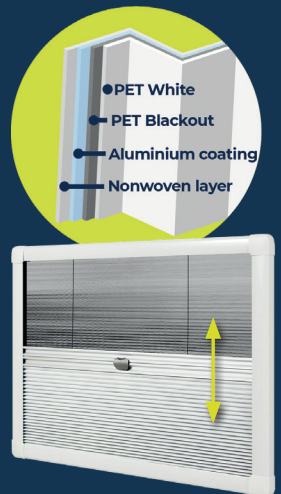

Window Blind Solutions

Unlimited Creative Solutions (UCS)

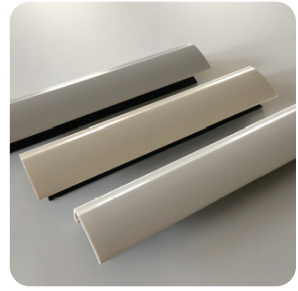

Thanks to its innovative design, the Horrex UCS is the most compact, quick to install window blind and flyscreen system on the RV market. The attractive, yet practical design has a solid construction to ensure quiet and hassle-free use. This is particularly important when driving a motorhome.

The high-quality flyscreen mesh allows excellent airflow while keeping unwanted bugs out. The standard UCS configuration combines mesh at the top and fabric at the bottom, however it is possible to apply only mesh or fabric.

Profile Packs

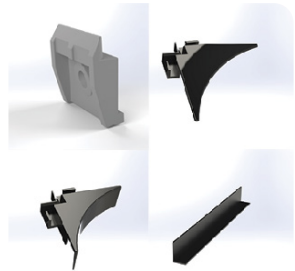

Covers and caps are available in traffic white (RAL9016), cream (RAL9001) and grey (RAL7047). We provide other colours on demand with a minimum order quantity. The covers and caps are clickable and therefore easy to replace for a change of colour or repairs.

Converting packs

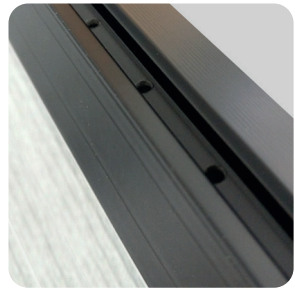

Our blinds systems are unique because of the modular design. Our clickable parts can make the application on other windows is possible, by buying the converting packs.

This include the moons and profile in shape T or L depending on the model

Ventilation

In order to reduce the accumulation of heat between a 100% black-out single pleated or honeycomb blind and a window, Horrex's UCS will be provided with perforated profiles to allow ventilation.

Black Out 'Excellent'

A regular pleated blind has holes in the fabric for the guiding cords. To prevent light coming through, Horrex provides a 100% black-out option consisting of cord guiders that are placed behind the fabric.

R5000 Windows

FRAME

Aluminium
+PVC

FABRIC

Black-out
pleated blind
with insect
screen

Specially designed to fit the Radius 5000 curvature of campervan walls. The production process, together with the curvature creates a flush look and makes it 100% leakage free. Double-glazed and UV resistant tinted acrylic glass make these windows ideal for the vanlife summers.

STYLES

Straight
Curved

Standard to fit our windows, these blinds are the highest quality, for the most affordable price. Install behind or even directly onto interior panels. The "Prima" model is very slim, due to the color being directly on the frame. There are two standard color options available, but if you prefer a different color, it's possible to convert them by applying one of the clickable profile packs.

Prima Blinds

Resizeable blinds

FRAME	FABRIC	SIZE
PVC 	Black-out pleated blind with insect screen	Custom

Not only can the UCS easily change its color and adapt to different window mountings, the resizable DIY kit also makes it possible to create a blind for any window size on the market.

With just 15 standard sizes it can be made to fit any window size! In combination with the UCS converting packs, it can be assembled to fit any window type on the market

The UCS is standard to fit rubber framed windows and can be made to fit any other window by purchasing one of the converting packs. The color can be changed to preference with adapting one of the profile packs.

*Delivered in a ready to cut kit with instructions.

2 Flyscreen Doors

All Horrex flyscreen doors are equipped with high-quality pleated mesh to offer protection against insects while ensuring an excellent airflow.

From the inside, the dark mesh provides an excellent view of the outside. The sliding mechanism is fully adjustable and silent in operation.

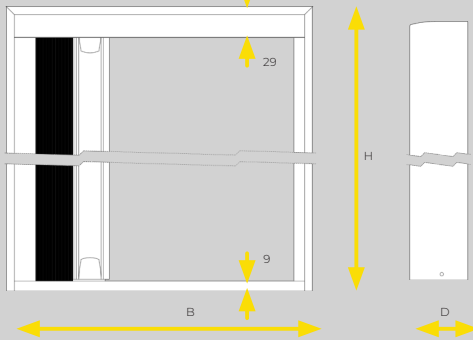

The unique modular system means that the flyscreen doors can suit a wide range of caravans, camper and campervan models.

Horrex flyscreen doors are available in aluminium and PVC versions.

Aluminium

FEATURES

Optional threshold

The aluminum screen door is solid & lightweight construction and has a premium coating, making it a high end flyscreen. It is specially designed for the aftermarket to replace older flyscreen doors to replace other screen doors or as a solution for vehicles not supplied with a screen door at the factory. It can be mounted in any direction and has smooth and quiet operation.

* Top & Bottom Rail packs can be ordered separately

Van Flyscreen Doors

Horrex develops and manufactures flyscreen doors for campervans in anticipation of the growing market.

The lightweight aluminium flyscreen door gives van owners the opportunity to enjoy fresh air and a wide open view of the great outdoors, without having to worry about mosquitoes and other annoying insects swarming the inside of the vehicle.

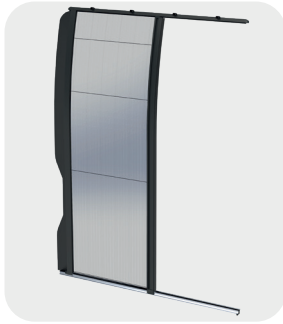

The curved cassette and pullbar take up a minimum of interior space. The screen has a smooth and silent operation.

The flyscreen door is available for a number of van types.

Our aftermarket VFSD range is made to fit the models in the overview before the interior is build. It does not always fit brand specific campervan lay-outs. If customers are looking for a flyscreen to replace their old (defective) screen door, we always recommend purchasing the model-specific article via the vehicle manufacturer!

This assures that the screen door fits 1:1 in the camper van. The model specific flyscreen is prepared at the factory to fit the interior of their camper.

Fiat Ducato | Peugeot Boxer | Citroën Jumper Opel Movano| Ram ProMaster

3 Tailgate Flyscreens

Horrex also provides manually operated screens for the backside of recreational vehicles.

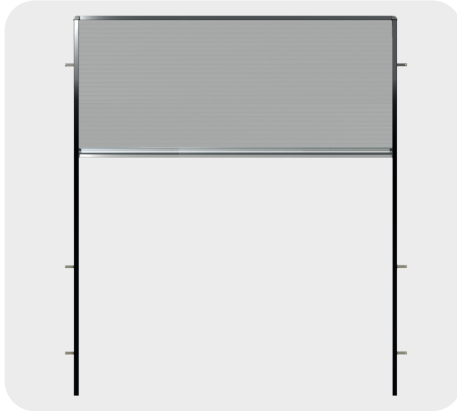

Fully adjustable screens are available for Fiat Ducato vans family with hinged rear doors. We would welcome development requests for larger series of different bus camper makes and models.

For motorhomes and toy haulers (US market) we also provide flyscreen solutions with optional shading for more privacy and to protect the interior against harmful UV-rays. Please get in touch for more details.

Rear Screens

FRAME	MESH	SIZE
Aluminium	Pleated	Fiat Ducato Peugeot Boxer Citroen Jumper Opel Movano

For the ever-growing campervan market, Horrex offers a series of tailgate flyscreen solutions. The aluminium framed rear flyscreen allows users to maximise airflow in their vehicle while being protected against insects. (for models from 2007)

* Made to fit

Custom Rear Screen

FRAME	MESH	SIZE
Aluminium	Pleated	Custom

For the ever-growing campervan market, Horrex offers a Customizable Rear Screen to fit to your needs. But needs gap filling.

4 Room Dividers

Thanks to the innovative design the room dividers are user-friendly and quick to mount or dismount.

In addition, they are light for their size and span. With the help of specially designed runners, the curtain stack is reduced to a minimum and takes up only a small amount of space when stored. As with all Horrex products, the room divider is highly modular and modifiable on demand. The track can be pre-bent, according to your specifications. The room dividers are available in two options, a basic and a more luxurious XS version.

XS Version

FRAME

FABRIC

Pleated  

FEATURE

Click closure

Our room divider is the perfect solution for separating rooms, creating more privacy. It can easily be tailored in width and height, to fit in any situation. Not only for caravans, motorhomes and campervans, but also for mobile homes and yachts.

What makes our roomdivider stand out is it's cleverly designed XS clicker. This attribute makes sure the roomdivider is secured and does not rattle. Together with its XS magnet closure, it can always be made secured whether in use or not.

5 Clike Bike

Meet Clike Bike, a sister company within the Driving Change Group. These Dutch designed and build e-bikes are compact, comfortable and customizable. With a sturdy aluminium frame and a unique profile for clickable accessories.

More information about Clike bikes can be found at: www.clike-bikes.nl

iRider

RANGE WEIGHT MEASUREMENTS

60KM	16.35KG	168 x 63 x 107 cm 168 x 31 x 77 cm (when folded)
------	---------	--

The Clike iRider is a compact electric e-bike with a travel radius of up to 60km. Featuring a Zehus rearwheel motor and regenerative brakes, the compact and light weight e-bike is great for urban adventures.

Wanderer

WEIGHT MEASUREMENTS

14KG	168 x 63 x 107 cm 168 x 31 x 84 cm (when folded)
------	--

The Clike Wanderer is a high-end non electric bike built using the best parts and materials. It is very lightweight at just 14 kg and easy to store thanks to the foldable steering and padles.

6 InnoSlide

INNOVATIVE CARAVAN, CAMPERVAN AND MOTORHOME SLIDE-OUTS

Interior space innovation

InnoSlide is another sister company within the Driving Change Group - we have developed a new slide-out system that provides more living space in your recreational vehicle. For small-sized vehicles, you can have the luxury of a bigger model without the extra weight. The slide-out is watertight and lightweight. It has a stylish design with radial corners and closes flush against the caravan, camper or campervan wall.

As the slide-out designer and manufacturer, we provide on-site support during tests/implementation and can customize the system.

More information about InnoSlide can be found at:
www.inno-slide.com

Slideout for Caravans & Motorhomes

The InnoSlide is designed to create more living space in a motorhome or caravan. The system is self-supporting and does not require reinforcement of the vehicle chassis or extra connection to the chassis for installing.

The Slide-out is operated by 4 computer controlled motors, the computer constantly checks if the motors are in line and corrects or stops the motors if they are obstructed.

Due to a special seal and its design the system is watertight.

Campervan

The InnoSlide is also available for campervans.

We offer a slide-out that fits the Fiat Ducato, Peugeot Boxer, Citroën Jumper, Opel Movano, Mercedes Sprinter and VW Crafter/MAN TGE. Mercedes Sprinter and VW Crafter/MAN TGE models up to 2017. More models are in development. The slide-out provides endless opportunities to design new internal layout options.
